Good article about the global recycling problem: C&D coming out from there. A bit biased, but does make some good points on educational and networking junction for all biomass industries.

What's something about you (a fun fact) that not many people know?

I enjoy cooking and baking for family and friends. I enjoy creating a presentation equipment to create new markets that did not exist before.

What do you find most rewarding about working in this industry?

End markets in general because of local or regional supply and demand. As involving in a multi-city waste & recycling industry.
