CDRA President’s Message

It Is The Busy Season For Everyone, Including The CDRA

by Troy Lautenbach, President
Lautenbach Recycling
Mount Vernon, WA

For many of us in the C&D recycling industry, summer time is the time when work ramps up, vacations challenge our operations, and safety, fires, and increased highway traffic are on our minds. It’s full out GO time.

At the CDRA, it is no different. We have been moving the association along on many fronts.

- We are into our fifth month of working with Bostrom, our new management firm and continue to explore new ideas for new growth and increased influence.
- We have added more than 10 new members since our last newsletter.
- We are finalizing an integrated marketing plan to engage with members, potential members, industry partners, regulators, customers, and the public. The plan uses both traditional media and social media.
- We have released our papers on C&D fines in order to help members better handle these challenging materials.
- We also released a protocol on gypsum recycling designed to help both those looking to process the material, as well as the regulatory community that oversees us.
- We are planning for our C&D World 2019 conference in Brooklyn NY March 10-12. Let us know if you have ideas and topics you would like us to cover.
- We are planning our mid-year board meeting, which is set for August 25 in Chicago. We also will spend a day on strategic planning for the CDRA, in order to map out the industry’s long term future.

Our dynamic board continues to be engaged and very active. We welcome members to join a committee if you feel you have the time.

I look forward to continuing to share the successes and accomplishments of the CDRA as it works on your behalf. As always, please contact me if you have questions, would like to share concerns, or are interested in getting involved. I – and the CDRA - am here for you.

Besides serving as President of the CDRA, Mr. Lautenbach is President of Lautenbach Recycling, Mt. Vernon, WA.

CDRA'S NEW WEBSITE HAS LAUNCHED!

Please note, all members will have to create and activate a new user account. Enter your last name and email address, and you will receive an activation email from info@cdrecycling.org. If we can successfully match your previous record, the email will provide an activation link. If not, CDRA staff will be notified and will follow up with you.

As a reminder, only the main contact for your company can renew membership and update the company information on the website.

Please contact info@cdrecycling.org if you have any questions.
Regulations and legislation affect the C&D recycling industry strongly, in both a positive and negative manner. The CDRA promotes the viewpoint of C&D recyclers to regulators and legislators across the United States. By becoming a pledge member, you help us achieve our goal to make sure the message of the economic advantages of recycling, as well as the environmental advantages, are brought to the attention of policymakers at all levels.

Name (please print) ____________________________________________________________
Signature ___________________________________________________________________
Company/Organization ________________________________________________________ CDRA Member? ❑ Yes ❑ No
The Above Organization Pledges a Donation of: ❑ $1000 ❑ $2000 ❑ Other (specify amount) _________

❑ Please invoice us for the above amount divided into quarterly payments
   (1st Quarter: May 31) (2nd Quarter: Aug. 31) (3rd Quarter: Nov. 30) (4th Quarter: Feb. 28)

Please note that the Construction & Demolition Recycling Association has been designated by the Internal Revenue Service as a 501(c)(6) organization. CDRA is incorporated in the state of Illinois. Federal ID# 20-0513267
We recommend you consult your tax professional for questions regarding the deductibility of donations to this fund.
Trucks are a critical component of a C&D Recycling business. Most companies use trucks for various purposes including roll off, transfer hauling, demo and pick up and hauling.

What’s at Risk?

In the insurance world, business auto coverage represents the greatest potential risk to large loss. A serious auto crash can trigger losses in multiple insurance categories: Workers Comp, Auto Physical Damage, Auto Liability and potentially Umbrella Liability. In the past several years, insurance companies have been paying out more business auto claims for larger amounts. For this reason, insurance companies have become very cautious with underwriting businesses with auto risk, particularly heavy trucks.

Currently, the insurance industry is in a “hard market” for business auto coverage, particularly with heavy trucks. Essentially this means more careful underwriting, more cancellations and significantly higher rates per vehicle. Many insurance carriers that previously offered coverage for trucks in recycling operations are pulling out of this industry segment. Those that are remaining are asking for large increases, even for businesses with good loss records. It is not uncommon to see 15% rate increases in one year for companies with excellent loss history. Those with poor loss histories or other negative indicators, 50-100% rate increases are being seen. This type of increase in operating cost is very problematic for the recycling business owner.

In situations like this, applying effective risk management is the only influence a business owner can exercise upon the problem. There are several important areas that can be focused on that will reduce the risk of loss, maximize operational efficiency and minimize increased insurance costs.

Driver Selection

Employee hiring is a critical step for any business, and more so when they are driving your trucks. A formal driver selection program is needed to ensure new hires meet minimum driving experience, safety, and driving records. Most insurance carriers reserve the right to approve or exclude drivers based on driving history and experience.

Fleet Maintenance

A formalized fleet maintenance program is essential for any size fleet. An important starting point for fleet maintenance is an effective driver pre/post inspection program. You’ll find this with best practice companies that offer a formalized program that each driver takes seriously. The program includes training for drivers, solid documentation, and periodic audits.

Use of fleet maintenance software has proven effective for many companies and allows for PM as well as documenting trends in maintenance and cost.

Driver Monitoring and Training

Monitoring drivers on performance, pre/post trip, vehicle condition and related is essential. Training should be frequent and regular and documented. Example topics might include:

- Various safety topics
- Defensive Driving
- Effective pre/post trip inspections
- Use of driver video footage– good example / bad example
- Incident review as lessons learned
- Safe load / off load of dumpsters
- Proper tapping
- Etc.

CAB / SAFER / CSA

Central reporting agencies exist for the sole purpose of recording safety and maintenance related data for trucks that are tied to DOT or MC / MX numbers. SAFER is a limited data source and is available at no cost. CAB pulls from additional sources and is available as a subscription service. Both provide important data that is reviewed by insurance underwriters and law enforcement. Every business that operates trucks should be regularly monitoring this information and utilizing it to provide direction to how fleet operations are managed. See links below:

Got Fleet Safety continues on page 12
Executive Director’s Message

The Biggest Event in C&D Going to The Biggest City In the U.S.

by William Turley, Executive Director
Construction and Demolition Recycling Association (CDRA)

More than 20 years ago the CDRA ventured into the Big Apple, sort of, to hold its second ever C&D World. Probably one of the most colorful events ever held in the C&D industry, I have a lot of stories from that exhibition. The sessions were actually held in the Meadowlands in New Jersey, but our tours for the event were to a concrete recycling operation in the Bronx, which being in the Bronx back then was an interesting experience in its own right, and to Star Recycling at 123 Varick Avenue in Brooklyn, where the Lomangino family had installed the first mechanized mixed C&D recycling facility in the United States. Quite an eye opener for the attendees, and for those who hadn’t experienced all that New York City could offer, something they talked about for years afterward.

Well, for the 26th C&D World, held March 10-12, 2019, we are going back to Brooklyn to hold the main meeting at the New York Marriott near the Brooklyn Bridge. We are also going back to 123 Varick Avenue for a tour. This time it is the new, state-of-the-art facility of long-time CDRA member Cooper Recycling that will be featured. Please be aware there will only be a limited number of tour spots available.

But facility tours are only part of C&D World, which remains the only event focused on the C&D industry. Unlike many other industry events, the main draw of C&D World is not the exhibit hall—though the vendors participating will have a lot of interesting products and services for the industry. But instead, the informative sessions remain the highlight of C&D World, and 2019 will be no different.

We have confirmed sessions on:
• Labor Force Issues
• Economic Forecast
• Biochar from C&D Wood
• Legislative/Regulatory issues
• Facility Fire Prevention and Reaction

The 2018 C&D World was lauded for its great sessions, and 2019 promises to be even better. Registration will open soon for C&D World 2019. Notifications will be sent to all outlets when that starts, and you can sign up at www.cdrecycling.org. But if you would like more information now, contact the CDRA at info@cdrecycling.org. 

Mr. Turley is Executive Director of the CDRA.
Legislative and Regulatory Committee Update

by Brock Hill, Legislative Committee chair
Construction and Demolition Recycling Association (CDRA)

The C&D Recycling Association’s Legislative Committee does important work for the C&D recycling industry by tracking and trying to affect important policy changes. Below are some of our current activities:

• The main activity with U.S. Environmental Protection Agency has been with the Sustainable Materials Management in the Built Environment project. Currently, the EPA is determining the priorities the agency will follow in keeping the SMM work going. This is important, as a major part of SMM work is the end of life disposal options for building materials. CDRA remains on the steering committee for this effort.

• The full C&D fines documents are now available to members on www.cdrecycling.org, and Executive Summaries of the documents are available to the public. The complete documents will be updated by the end of the summer, according to Dr. Tim Townsend, as further tests are completed on the fines samples members have sent in.

• The gypsum protocol developed for the CDRA by Dr. Timothy Townsend and his team at the University of Florida has been completed and its availability announced. The protocol provides technical advice on recycling drywall, information useful both to recyclers and to governmental entities looking to regulate the material.

• A Frequently Asked Questions (FAQ) document about the OSHA employee silica exposure rule has been completed after negotiations between our construction industry coalition, unions, and OSHA. Our lawyer said it wasn’t perfect for the industry, but was the best we could hope for. Action moved quick on revisions to the document, and Bill Turley was able to revise a few items that pertained to concrete recycling with guidance from a few members. Any member who would like a copy of the final version of the document, please contact the CDRA at info@cdrecycling.org.

• The Legislative Committee is working on a collaboration with the Safety/Risk Management committee to fill in the gaps between regulatory compliance issues that may affect smaller companies with fewer than 100 employees. Possible information repository and knowledge sharing about employment and labor law that affects operations.

As always, the CDRA would like to hear from its members about legislative and regulatory issues affecting the C&D recycling industry.

Besides serving the CDRA’s board and chair of the Legislative Committee, Mr. Hill is Vice President at Premier Recycle Company in San Jose, CA.
The Evolution of Third-Party Certification
Congratulations to several CDRA-member facilities

by Stephen M Bantillo
Executive Director, Recycling Certification Institute

As reported in the previous newsletter, the Recycling Certification Institute (RCI) has been working with several C&D facilities throughout the country that were making progress toward their Certifications. RCI is pleased to announce the addition of ReEnergy Roxbury (Boston, MA), Premier Recycle (San Jose, CA), and Recovery 1 (Tacoma, WA) to the growing list of facilities Certified with the CORR Protocol and meeting the National Standard level for third-party certification. As a reminder, LEED projects taking their C&D materials to these facilities automatically qualify for the additional MRpc87 Pilot Credit point. We have several more facilities in the queue and we look forward to sharing that news at a future date.

On the topic of future news, we know you are interested in LEED v4.1. So are we. CDRA and RCI have submitted our proposals to the USGBC for updates to the Materials and Resources section of LEED. We are anxiously awaiting the public comment period where we can review and respond to what the USGBC is considering as updates for LEED v4.1.

In July, I had the pleasure of being an invited speaker at the California Resource Recovery Association Annual Conference in Oakland, CA. and my speech was focused on The Evolution of Third-Party Certification. The City of San Jose (CA) launched the nation’s first C&D certification program nearly 20 years ago and I’ve had a bit of a ringside seat examining how programs have developed since then. While the concept of facility certification caught on slowly over the last couple decades, that slow pace of development has provided local governments an opportunity to examine earlier program versions for their successes, as well as areas where they may be improved, then fine-tune their programs for implementation. Not one to stand idly by, CDRA jumped in head first and went straight for a National Standard level program. Using the ISO protocol, the CDRA assembled experts from around the country representing the unique voices of the industry and developed the CORR Protocol.

Since the creation of the MRpc87 Pilot Credit, both industry and local governments have begun to find value in the transparency and verification of C&D facilities’ reported recycling rates. The evolution and advancement of third-party certification are primed to move more quickly now, as evidenced by multiple positive indicators. Developers and builders demand accurate information, and some have stated their willingness to transport materials additional distances for the verified rates and an extra point for their LEED projects. The number of local government programs that have recognized the CORR Protocol as the National Standard is on the rise too. They are writing MRpc87 language into their regulations and codes, referencing RCI in their resolutions and rules, and even providing automatic approval of RCI as a Qualified Certifier for their C&D programs. And more facilities are seeking third-party certification at the National Standard level. Will your facility be next?

Stephen M. Bantillo is Executive Director of the Recycling Certification Institute and can be reached at info@recyclingcertification.org.

What Is Your C&D Facility’s Recycling Rate?
The Recycling Certification Institute has launched its online version of the Certification of Recycling Rates (CORR) program. This program provides credible, ISO-level third-party certification of C&D facilities’ true recycling rates.

Can You Prove It?
CORR is the only program that provides a credible, third-party look at the true recycling rates. It is the only program recognized by USGBC for the new extra point under LEED for using a certified recycling facility.

Why Become Certified with RCI?
• Government agencies want accurate reporting of C&D recycling rates from facilities
• Many green building programs require recycling of C&D materials
• LEED specifies use of CORR to gain an extra point for your clients
• Verify your facility’s performance and have your recycling rate published with RCI
• Give your facility a marketing edge over the non-certified facilities

CORR is administered by the Recycling Certification Institute. For more information, including scheduling a recycling rate certification or to register your facility with the Institute, go to www.recyclingcertification.org

Fleet Technology

Technology has developed exponentially in recent years to assist with fleet safety. GPS and Dash Cams are two that have become more effective and popular. There are a few major brands on the market that offer excellent options for better managing liability aspects of driving as well as tools for improved driver operations and safety. Any recycling business with truck operations would be well advised to investigate how technology may improve operations and safety.

CDRA is presenting a webinar on utilizing technology as one tool to manage fleet operations on September 18. This webinar will be available for replay on the members’ section of the website. Additionally, CDRA will be producing a sample fleet safety policy for members later in 2018.

Managing fleet safety has always been an important area. Considering the increased industry losses and skyrocketing insurance costs, it has become even more critical for recycling businesses to re-evaluate how this is managed and pursue the “next level” of managing fleet safety. For any additional information, please reach out to CDRA or the Risk Management Committee.

Besides being Chair of the CDRA’s Risk Management Committee, Mr. Schumacher is Vice President at Assurance Agency. He can be reached at jschumacher@assuranceagency.com; 847.463.7224
PROUD TO SUPPORT THE CDRA!

CDRA members subscribe to any of our informative magazines, contact subscriptions@CDRecycler.com
DEDICATED TO ADVANCING THE INDUSTRY

Becoming a CDRA member offers your business support and resources that can't be found elsewhere. The CDRA promotes and defends the environmentally sound recycling of Construction and Demolition (C&D) material through a diverse and unified voice of members committed to sustainability.

CDRA members are an important part of association efforts as we focus on the future of C&D debris recycling over disposal.

CDRA members process millions of tons of: Asphalt, Concrete, Gypsum, Metals, Wood, Shingles, and more...

CDRA FOCUS

Founded as the Construction Materials Recycling Association (CMRA) in 1996, the association adopted the name Construction & Demolition Recycling Association (CDRA) in 2013 to best reflect its membership base: private sector businesses, public sector agencies and vendors to the C&D recycling market. There are a broad range of industries represented, including construction, demolition, public sector services, waste management services, rock and building materials companies, road construction companies, and more.

HELP YOUR BUSINESS STAY CONNECTED TO THE FOLLOWING:

- Regulations and Legislation that affect your business
  - Support with pending rules and regulation lobbying
  - Franchising, flow control
  - OSHA Silica rules
- LEED and USGBC trends
- Certification opportunities
- Fines
  - ADC
  - New product development
- Safety Issues
- Employee safety
- Fire Safety
- Technology advances
  - Screens
  - Shredders
  - Robotics
  - Gasification
- Annual meetings in great locations that include facility tours
- Shingle recycling activities, markets, trends and regulations
- Industry data and statistics available for use with customers, regulators and local and State government entities
- Comprehensive industry database with state-by-state regulations
- The latest industry news
- Finished Product Markets and Trends
