CDRA President’s Message
The Road Ahead For C&D Recycling

by Terry Weaver, President
USA Gypsum
Denver, PA

A glance in the rearview mirror from 25 years ago shows two men working from home on brilliant ideas. Jeff Bezos founded Amazon to sell books and William Turley founded what would become the Construction & Demolition Recyclers Association (CDRA) to promote C&D Recycling. Twenty-five years later both have grown to a leading position in their respective industries. Today the CDRA is the only advocate specifically for C&D recyclers. Thank you, Mr. Turley and all the people who believed in and supported this endeavor!

The 2010s transformed C&D Recycling! Few people envisioned a decade of cheap energy and the impact on end markets. Wood fuel, an important market for reclaimed C&D, suffered as cheap natural gas replaced alternative fuels.

“we can’t just drill our way to lower gas prices”.
President Barack Obama 2011

The China Sword depressed fiber and plastic markets. Hydrogen sulfide (H2S) problems limited processed fines outlets in many markets.

The longest economic expansion in US history ended the decade with record inbound C&D volumes and limited end markets.

CDRA acts following C&D World 2019. Our membership clearly communicated the need for more end markets and a great idea led to research on the theory that C&D wood turned into biochar and combined with C&D fines would sequester H2S.

Biochar and fines proof of concept was achieved at the University of Florida, and the CDRA board approved a substantial research project that has the potential to support markets for C&D wood and process fines dramatically increasing recycling rates.

C&D wood and process fines as a remediation product? Biochar is an effective method of immobilizing, adsorbing and sequestering a number of heavy metals including lead (Pb), chromium (Cr), cadmium (Cd), mercury (Hg), nickel (Ni), copper (Cu), and zinc (Zn) from soils and water (Ahmad et al., 2014 and Beesley et al., 2015; Kumar et al. Per- and polyfluoroalkyl substances (PFAS) often called the “forever Chemicals” are receiving increased scrutiny by the EPA. Research has demonstrated that biochar is effective as a sorbent for PFAS. President’s Message (Contued from page 1)

need for remediation is growing as a result of more regulatory attention to this newly recognized class of contaminants. The EPA is searching for solutions and more research is needed.

Repeating the Roaring 20’s? The 1920s were a time of economic expansion. One hundred years later, C&D Processors success might be dependent on increasing beneficial use of reclaimed materials, requiring producers to identify markets and ensure that products are consistent and available when customers need them.

C&D World 2020 will feature an end markets panel sharing innovative processes incorporated into C&D systems in response to end markets challenges.

Please join us at C&D World 2020 to Collaborate, Innovate, Advance and Celebrate 25 years of successfully recycling millions of tons C&D. Explore how reclaimed C&D materials can meet future demand for products. A high light of our meetings is the networking Fundraiser event at Alexa’s Bar in the Paris Hotel Wednesday March 11 6-8pm. Join us for a drink, help us welcome Neel Kalit and support the biochar and fines research project.

See you in Las Vegas!

Welcome Neel Kalita

Ms. Kalita will Join the University of Florida to conduct the biochar-fines study under Dr. Townsend. Neel worked as an Environmental Engineer (Air Permitting) for IDEM-State of Indiana for over two years. Prior to IDEM, she interned with the Michigan DEQ in 2016 for Flint Water Sampling, and Non-point source pollution BMP projects. Neel graduated with a MS Civil Engineering from the University of Toledo in 2016. She had the opportunity to work for US EPA’s P2 project, and Ohio Health Department’s Radon project in Toledo. Neel is from Assam, India, and completed her BE (hons.) Civil Engineering in 2012 from Assam Engineering College (AEC), Guwahati, India. She was a fellow at Indian Institute of Technology for Urban Land Use Planning project after graduating in 2012 from AEC. In her spare time, loves to practice Archery, Row, and swim.

Besides serving as President of the CDRA, Mr. Weaver is President of USA Gypsum, Denver, PA.
2020 SPONSOR MEMBERS
The CDRA offers valuable sponsor level membership opportunities to those who support the work of the association to promote and defend the environmentally sound recycling of Construction and Demolition (C&D) material through a diverse and unified voice of members committed to sustainability.

### Construction & Demolition Recycling Association

**PLEDGE CARD**

Regulations and legislation affect the C&D recycling industry strongly. The CDRA promotes the viewpoint of C&D recyclers to regulators and legislators across the United States. By becoming a pledge member, you help us achieve our goal to make sure the message of the economic and environmental advantages of recycling are brought to the attention of policymakers at all levels.

The Below Organization Pledges a Donation of:  

- $500
- $1,000
- $2,000
- Other (specify amount) $________

Please note that the Construction & Demolition Recycling Association has been designated by the Internal Revenue Service as a 501(c)(6) organization. CDRA is incorporated in the state of Illinois. Federal ID# 20-0513267. We recommend you consult your tax professional for questions regarding the deductibility of donations to this fund.
End Markets Committee Update

End Markets Committee Begins its Work

by Troy Lautenbach, Interim Chair of the End Markets Development Committee
Construction and Demolition Recycling Association (CDRA)

In response to members’ needs, the Construction & Demolition Recycling Association formed the End Markets Development Committee, the mission of which is to provide guidelines and other assistance in developing end markets for items in the construction and demolition material stream. Committee members are comprised of volunteers from CDRA member companies. An online action agenda has been developed and the committee members can view and comment anytime by requesting the link from CDRA staff.

The biggest project the committee is monitoring is continuing work on how to best utilize biochar with C&D fines in order to attenuate H2S. This can allow the fines to be used in more markets. During our committee’s last conference call, Dr. Townsend of the University of Florida, which is conducting the research, reported that C&D Fines/Biochar proof of concept was proven with positive results. The researchers will continue to wrap up the first phase of the work, which included a simulated landfill mixed with C&D fines and Biochar. Additional updates will be provided on future monthly screensharing initiatives of the project. The primary researchers will be in attendance at the C&D World in March.

Work on updating the CDRA resource “50 State Regulatory Profile” will begin in the next few months. Information on the C&D regulations in all 50 state is provided on the main CDRA website, www.cdrecycling.org. Besides the regulatory language, contact information on the main state contact for C&D issues is included. This work was last updated in April 2018, and because regulations and state personnel change all the time, the list needs to be updated regularly.

CDRA Board Member Kathy Powles, Falcon Green Resources, has developed an outline document that can be used to walk through and explain the thought process of developing a new end product. That outline is currently with CDRA staff in order polish for sharing with the CDRA membership.

Does all this sound interesting to you? Contact the CDRA at info@cdrecycling.org about joining the committee. We are always looking for new ideas!

Besides serving as Interim Chair of the End Markets Development Committee, Mr. Lautenbach is President of Lautenbach Recycling and is Past President of the CDRA.

LOCK OUT TAG OUT & MACHINE GUARDING

This program will provide a recycling specific look at these two critical safety programs.

Who Should Attend: Owners, MRF Managers, Supervisors
When: Wednesday, March 24; 12 PM – 1:15 (CST)
Cost: Free
Registration: Coming Soon (Check back on the latest news at cdrecycling.org/news)

The CDRA Risk Management Committee is offering a webinar that will discuss Lock Out and Machine Guarding. These are two related and critical safety programs that apply to virtually every recycling operator. According to OSHA, proper Lock Out procedures prevent 120 fatalities and 50,000 accidents each year. Lock Out procedures are a focus inspection item during OSHA inspections and violations often trigger Willful Violations resulting in penalties of $126,000 per violation.

Many recycling companies have some lock out and machine guarding procedures in place, but many do not have a full program implemented. This webinar will discuss all aspects of a Best Practice Lock Out and Machine Guarding program.
Membership/Marketing Committee

One Good Idea—Lead, Resource, Referral—Pays For Membership (And More)

By Terri Ward, CDRA Membership/Marketing Committee

Construction and Demolition Recycling Association (CDRA)

I’ve been involved in buying and selling capital equipment for waste and recycling applications for more than 25 years. And while the CDRA appreciates and relies on vendors and consultants, the primary reason we exist is to support our Recycler members—the C&D processors, generators, landfills, and haulers engaged directly in the daily business of recycling.

Over the years, I’ve watched countless interactions between members during site visits, exchanging ideas and advice on a range of subjects—from shredding, screening and sorting techniques, to dust collection vs. suppression, asphalt vs. concrete paving, labor retention strategies, and so on. I can’t recall a time where the networking and ideas exchanged didn’t leave everyone feeling better for the experience—in some cases yielding over 6-figures in tangible benefit!

Last month I had the privilege to tour a prospective buyer through three different members’ operations. My client was blown away that in each case, company owners were so ‘hands-on’ engaged in their businesses, yet so generous with their time and advice—that he learned more over the three visits than previous months of traveling the country. To me, this is the typical “DNA” of our CDRA members.

If you haven’t experienced this kind of ‘organic’ benefit yourself, I encourage you to join a committee, attend the annual board meeting, join us at C&D World in March, or reach out to Bill or a board member. There are many ways to plug into CDRA and all it has to offer.

If you don’t have time to participate proactively, don’t forget the CDRA website houses white papers, webinars, and other valued resources in the ‘members only’ section. Here are two specifics ways the website can help you:

- Find-a-Recycler Update! —One of the most popular areas of the CDRA website for the public, the “Find-a-Recycler” feature allows potential customers to find you. You can now log in and add a searchable description of what your company does, along with a list of materials your facility accepts. Call the office if you have any trouble logging in.

Vendors and consultants—while not tailored specifically for us, this also serves as a buyer’s guide of sorts, through the keyword search and member type search, providing a valuable promotional tool along with membership.

- Safety Manual — Bland Recycling’s Boe Bland summed it up perfectly in a recent email—Thanks Boe!

Holy freaking cow on the CDRA Safety Manuals that I just realized you guys created. This helps so much that you have made this available to the members in a word document that we can modify to fit within our own program... Also in a Spanish version, this helps us greatly! I need to log on more frequently rather than just when C&D World comes around.

Don’t be like Boe. Log in sometime other than when you’re registering for C&D World and to save at the Paris Hotel. In fact, why not take some time when you log in to renew your membership and even step up to a sponsor level this year?! 🎉

Terri Ward is co-chair of the CDRA’s Membership/Marketing Committee, and also serves on the CDRA’s Executive Committee.

---

TAPER-SLOT® Screen for C&D Recycling

- Lateral wedge deflectors prevent material from shifting laterally and catching under or wrapping around finger tips
- Efficient single motor design
- Large vertical drop to prevent material surfing
- High percentage of open area to maximize screening efficiency
- High RPM with a proper attack angle for maximum material travel speed and separation

Manufacturer of custom vibratory equipment since 1972
How often is it we hear the phrase "Quality versus Quantity"? It sometimes elicits a sense of conflict as if to suggest the two are mutually exclusive. In the current landscape of rules and regulations for C&D recovery, C&D facilities are being pressed to achieve higher quantities of recovered materials while at the same time the markets are demanding higher quality materials. So yes, in our industry there is an inherent conflict built into that phrase. But do we forego one in pursuit of the other? The answer should be “no”. Both are achievable, but we must look at solutions from a more holistic perspective.

The conflict between the two will always be present if rules and regulations demand higher recovery rates above all else. A key challenge is that there is only so much a facility can recover from the materials it receives. As the saying goes, “You can’t make a silk purse from a sow’s ear”. And the markets are increasingly sensitive to the quality of materials they receive from processors. Something must give.

Rules and regulations demanding higher recovery rates incentivize facilities participating in a local program to reject low quality loads or code the material as “trash” to maintain a high recovery rate if they want to continue participation in the program. Another pathway some facilities may take is even less desirable — falsely reporting a higher recovery rate — which comes with a host of negative implications. And further down the line are facilities that might accept the loads with low percentages of recoverable materials. These facilities may do a great job recovering what can be sent to market, but unfortunately their recovery rate may be too low to qualify them for participation in the local program.

The above scenarios may sound hypothetical to some, but they are real. From a rules and regulations perspective, there is conflict with each of the scenarios. From a holistic perspective, the system is falling short of the overall potential amount of recovered C&D materials. Is there a solution that minimizes the conflict and maximizes the recovery of C&D materials? We think there is, and it comes with numerous benefits beyond reducing the conflict.

Simply put, rules and regulations should focus on performance and not solely on a high recovery rate. What we mean by a focus on performance is that a facility should recover as much of the recoverable C&D material as possible. While that may sound simple in concept, we know there are complications and systemic challenges to be overcome. However, we believe this shift in focus will benefit local programs as well as the C&D industry.

Below is a short list of reasons why a focus on performance has more benefits than a focus on a high recovery rate and can contribute to a higher amount of recovered material overall:

1) A focus on performance acknowledges market challenges and rewards facilities for doing the best they can with the loads they receive.
2) Recovering 90% of the 20% that is recoverable is better than landfilling 100% of it.
3) Facilities are more likely to process all loads they receive.
4) More facilities can participate in local programs, which contributes to jobs and the economy.
5) Facilities whose operational models accommodate lower quality loads reduce the pressure on facilities whose equipment is designed to accept higher quality loads.
6) Effective programs should require third-party certification for facilities to verify performance and compliance, which contributes to a level playing field.

This emerging issue is an area that RCI will be exploring in the coming year and we look forward to hearing your thoughts and suggestions on the topic.

Stephen M Bantillo is Executive Director of the Recycling Certification Institute, and can be reached at info@recyclingcertification.org.

Recycling Certification Institute Update
Quality versus Quantity

by Stephen M Bantillo
Executive Director, Recycling Certification Institute

What Is Your C&D Facility’s Recycling Rate?
The Recycling Certification Institute has launched its online version of the Certification of Recycling Rates (CORR) program. This program provides credible, ISO-level third-party certification of C&D facilities’ true recycling rates.

Can You Prove It?
CORR is the only program that provides a credible, third-party look at the true recycling rates. It is the only program recognized by USGBC for the new extra point under LEED for using a certified recycling facility.

Why Become Certified with RCI?
• Government agencies want accurate reporting of C&D recycling rates from facilities
• Many green building programs require recycling of C&D materials
• LEED specifies use of CORR to gain an extra point for your clients
• Verify your facility’s performance and have your recycling rate published with RCI
• Give your facility a marketing edge over the non-certified facilities

CORR is administered by the Recycling Certification Institute. For more information, including scheduling a recycling rate certification or to register your facility with the Institute, go to www.recyclingcertification.org

Contact:
Recycling Certification Institute
PO Box 160166
Sacramento, CA 95816
916.242.8287
e-mail: info@recyclingcertification.org • www.recyclingcertification.org
Happy New Year and welcome to 2020. The Convention Committee has been hard at work to bring our members another amazing event. C&D World 2020 will co-locate with the ConExpo-Con/Agg show March 10-14, 2020 in Las Vegas.

Attendees to C&D World will be treated to an excellent half-day program which will begin with a keynote presentation by Ed Sullivan on the construction industry economics. Following the keynote is our end markets power panel that will discuss some of the innovative things they have been doing within the industry. End markets pose one of the biggest challenges for recyclers to manage, recycle, and create new opportunities.

As always, attendees to C&D World will get badges to enter the equipment exhibition at the Las Vegas Convention Center, which is truly a sight to be seen.

Sponsorships for C&D World 2020 are still available. Don’t miss this opportunity to raise your company’s visibility to the attendees at the CDRA Annual Meeting who will also be going over to ConExpo-Con/Agg. C&D World 2020 will conclude with our amazing fundraiser. Share a drink and network with other industry leaders at Alexa’s Bar in the beautiful Paris Hotel. Stay to become a CDRA pledge member, which helps the association achieve our goal to promote the message of the economic and environmental advantages of recycling, and ensure this message is brought to the attention of policymakers. This year we are looking for support for our latest project with the University of Florida, trying to help end markets for C&D wood and fines. CDRA promotes the viewpoint of C&D recyclers to regulators and legislators across the USA. Your pledge will help us achieve our goal to positively impact and support the C&D recycling industry.

For more information on sponsorships, go to https://cdrecycling.org/news/c-d-world-2020/who-attends/ or e-mail info@cdrecycling.org.

Look forward to seeing everyone in Las Vegas
Paul Kuhar
Convention Committee Chair

Besides serving as Chair of the CDRA Convention Committee and CDRA Vice President, Paul Kuhar is Vice President at Champion Waste & Recycling in Dallas, TX.
2020 C&D World Attendee Registration Form
Bally’s Hotel & Casino • Las Vegas • March 11, 2020

Register before January 18th and Save! Registrations accepted via fax, email, or online at cdrecycling.org.

No group discounts, each attendee must complete separate forms.

REGISTRATION CANCELLATION POLICY
All cancellations must be received in writing to CDRA via email, mail or fax. A refund minus a $50.00 administrative fee, per registration, will be issued if received by January 17, 2020.

Due to financial obligations incurred by CDRA, NO REFUNDS will be issued on cancellations received after January 17, 2020. Substitutions from the same company will be permitted at any time prior to the meeting start date without penalty. All refunds will be processed after the conference. For Exhibitors/Sponsors, only written notification of exhibit space cancellation is acceptable. Cancellations received on or before January 17, 2020 will have all monies refunded less a $200 processing fee. No refunds will be given for any space canceled after January 17, 2020.

If you have any questions, please contact us at 866-758-4721 or email us at info@cdrecycling.org. We look forward to seeing you at the upcoming C&D World!

On March 11, 2020, the CDRA will co-locate its C&D World 2020 Annual Meeting during the huge ConExpo-Con/Agg show happening March 10-14, 2020, in Las Vegas. Attendees to C&D World will be treated to an excellent half-day program, an exciting fundraiser at Alexa’s Bar at the Paris, as well as reduced room rates at Bally’s.
